

The Rise of Artificial Intelligence

AI adoption, market value, revenue and jobs,
year by year from 2018 to 2025

2.68	2,803.5B	26.5T	-0.75M
AI Adoption (sum, %)	Global AI Market Value	Est. Revenue Increase (USD)	Net Job Impact

Data and Approach

The data comes from one table, called '**The Rise Of Artificial Intelligence2 (1)**'. It was loaded into Power BI and a data type was set for every column. Each row is one year, from 2018 to 2025. DAX measures were then added and the report was made on two pages (dashboards).

Period	2018 to 2025 (8 years, one row per year)
Growth columns	AI Software Revenue, Global AI Market Value, Estimated Revenue Increase from AI, AI Contribution to GDP
Adoption columns	AI Adoption (%), Organizations Using AI, Organizations Planning to Implement AI, Organizations Believing AI Provides Competitive Edge, Companies Prioritizing AI in Strategy
Jobs columns	Estimated New Jobs Created by AI, Estimated Jobs Eliminated by AI, Net Job Loss in the US, Jobs at High Risk of Automation
Belief columns	Expected Increase in Employee Productivity Due to AI, Marketers Believing AI Improves Email Revenue, Americans Using Voice Assistants, Medical Professionals Using AI for Diagnosis

A part of the data as seen in Power BI

Year	AI Software Revenue	Global AI Market Value	AI Adoption (%)	Organizations Using AI	Organizations Planning to Implement AI	Organizations Believing AI Provides Competitive Edge	Companies Prioritizing AI in Strategy	Estimated New Jobs Created by AI	Estimated Jobs Eliminated by AI	Net Job Loss in the US	Jobs at High Risk of Automation	Expected Increase in Employee Productivity Due to AI	Marketers Believing AI Improves Email Revenue	Americans Using Voice Assistants	Medical Professionals Using AI for Diagnosis	AI Contribution to GDP	Estimated Revenue Increase from AI	AI Software Revenue	Global AI Market Value	AI Adoption (%)	Organizations Using AI	Organizations Planning to Implement AI	Organizations Believing AI Provides Competitive Edge	Companies Prioritizing AI in Strategy	Estimated New Jobs Created by AI	Estimated Jobs Eliminated by AI	Net Job Loss in the US	Jobs at High Risk of Automation	Expected Increase in Employee Productivity Due to AI	Marketers Believing AI Improves Email Revenue	Americans Using Voice Assistants	Medical Professionals Using AI for Diagnosis	AI Contribution to GDP	Estimated Revenue Increase from AI
2018	10.1	29.5	10%	35%	40%	40%	10%	5%	7%	87%	83%	1.2	41.29%	5%	20%	1.5	38%	461	35%	44%	46.40%													
2019	14.69	35	20%	37%	42%	47%	15%	8%	6.50%	88%	84%	1.8	42%	7%	25%	2	39%	465	38%	45%	47%													
2020	22.59	45	30%	40%	45%	54%	20%	12%	6%	88%	85%	2.4	43%	9%	30%	2.6	41%	470	40%	46%	47.50%													
2021	34.87	65	35%	42%	47%	61%	25%	16%	5.50%	89%	86%	3	44%	11%	35%	3.2	43%	475	43%	47%	48%													
2022	51.27	140	35%	45%	50%	68%	30%	20%	5%	90%	87%	3.6	45%	13%	40%	3.8	45%	480	45%	48%	48.50%													
2023	70.94	279	35%	48%	53%	73%	35%	24%	4.80%	91%	88%	4.2	46%	15%	45%	4.4	47%	485	48%	49%	49%													
2024	94.41	400	40%	50%	55%	78%	40%	28%	4.50%	92%	89%	4.8	47%	18%	50%	5	48%	490	50%	50%	49.50%													
2025	126	1810	63%	55%	58%	82%	45%	32%	4.20%	93%	90%	5.5	48%	20%	55%	5.5	50%	500	52%	51%	50%													

The report has two dashboards

Dashboard 1 - AI Growth Overview: AI adoption by year, AI software revenue against job loss, jobs eliminated versus jobs created, global AI market value and revenue increase by year, and what explains AI adoption.

Dashboard 2 - Jobs, Belief and Impact: what drives the estimated revenue increase, how belief in AI compares across groups, how organizations' use of AI changed by year, the main numbers, a year-by-year summary table, and jobs created versus eliminated by year.

Objectives of the Analysis

The analysis has two objectives. Each one is answered by one dashboard, and the charts follow the same order.

Objective 1: Track how AI adoption, market value and revenue have grown

See how AI adoption, software revenue, market value and the revenue increase from AI changed year by year, how jobs eliminated compare with jobs created, and what explains the rise in AI adoption. This is answered by Dashboard 1.

Objective 2: Understand AI's effect on jobs and how much people and organizations believe in it

Find out what most increases the estimated revenue gain from AI, how belief in AI differs across marketers, medical professionals, Americans and companies, how organizations' adoption of AI changed by year, and the overall numbers for jobs, adoption and market value. This is answered by Dashboard 2.

DAX Formulas Used

Five DAX measures were created on the data table. The formulas are shown as they were written in Power BI. Measures that divide use DIVIDE() with 0 as the alternate result, so there is no error when the bottom number is zero.

Measure 1: AI Adoption YoY Growth %

```
AI Adoption YoY Growth % =  
VAR CurrentYear =  
    MAX('The Rise Of Artificial Intelligence2 (1)'[Year])  
  
VAR CurrentAdoption =  
    CALCULATE(  
        AVERAGE('The Rise Of Artificial Intelligence2 (1)'[AI Adoption (%)]))  
    )  
  
VAR PreviousAdoption =  
    CALCULATE(  
        AVERAGE('The Rise Of Artificial Intelligence2 (1)'[AI Adoption (%)]),  
        'The Rise Of Artificial Intelligence2 (1)'[Year] = CurrentYear - 1  
    )  
  
RETURN  
DIVIDE(  
    CurrentAdoption - PreviousAdoption,  
    PreviousAdoption,  
    0  
)
```

Compares this year's average AI adoption with last year's, as a percentage change. Used in the AI Adoption YoY Growth % card on Dashboard 1.

Measure 2: Avg AI Adoption Rate

```
Avg AI Adoption Rate =  
AVERAGE('The Rise Of Artificial Intelligence2 (1)'[AI Adoption (%)])
```

The average AI adoption rate across all years. Used in the Avg AI Adoption Rate card on Dashboard 2.

Measure 3: Job Displacement Rate

```
Job Displacement Rate =  
VAR LatestYear =  
    MAX('The Rise Of Artificial Intelligence2 (1)'[Year])  
  
VAR JobsEliminated =  
    CALCULATE(  
        SUM('The Rise Of Artificial Intelligence2 (1)'[Estimated Jobs Eliminated by AI (millions)]),  
        'The Rise Of Artificial Intelligence2 (1)'[Year] = LatestYear  
    )  
  
VAR JobsCreated =  
    CALCULATE(  
        SUM('The Rise Of Artificial Intelligence2 (1)'[Estimated Jobs Eliminated by AI (millions)]),  
        'The Rise Of Artificial Intelligence2 (1)'[Year] = LatestYear  
    )  
  
RETURN  
DIVIDE(  
    JobsEliminated,  
    JobsCreated + JobsEliminated,  
    0  
)
```

Meant to show jobs eliminated as a share of jobs eliminated plus jobs created in the latest year. Used in the Job Displacement Rate card on Dashboard 1. Note: in the version written in Power BI, the JobsCreated variable sums the same Jobs Eliminated column as JobsEliminated, instead of the Jobs Created column - shown here exactly as it is in the report.

Measure 4: Net Job Impact (M)

```
Net Job Impact (M) =  
SUM('The Rise Of Artificial Intelligence2 (1)'[Estimated New Jobs Created by AI (millions)]) -  
SUM('The Rise Of Artificial Intelligence2 (1)'[Estimated Jobs Eliminated by AI (millions)])
```

Total jobs created minus total jobs eliminated, in millions. Used in the Net Job Impact (M) card on Dashboard 2.

Measure 5: Total Market Value (B)

```
Total Market Value (B) =  
SUM('The Rise Of Artificial Intelligence2 (1)'[Global AI Market Value(in Billions)])
```

Adds up the global AI market value across all years, in billions. Used in the Total Market Value (B) card on Dashboard 2.

Dashboard 1: AI Growth Overview

Objective 1.

The first page tracks growth. It shows AI adoption by year, AI software revenue against job loss, jobs eliminated versus jobs created, global AI market value and the revenue increase from AI by year, what explains AI adoption, and two cards (Job Displacement Rate and AI Adoption YoY Growth %).

Chart	Visual	Question it answers
1.1	AI Adoption over Years (%)	How has AI adoption changed by year?
1.2	AI Software Revenue vs Average Net Job Loss in the US	How do software revenue and job loss relate, on average?
1.3	Jobs Eliminated vs Jobs Created by AI	Are more jobs lost or gained to AI overall?
1.4	Global AI Market Value and Estimated Revenue Increase from AI, by Year	How have AI market value and revenue grown by year?
1.5	What Explains AI Adoption	What explains the rise in AI adoption?

Chart 1.1 AI Adoption over Years (%)

Chart type: Donut chart. Fields: Year, Sum of AI Adoption (%)

AI adoption climbs every year, and the most recent year stands out: 2025 alone makes up 23.51% of the total (0.63 of 2.68), followed by 2024 at 14.93%. 2018, the earliest year, is the smallest slice at 3.73%, showing how much faster adoption has grown in the last two years than in the first few.

Chart 1.2 AI Software Revenue vs Average Net Job Loss in the US

Chart type: Scatter chart. Fields: Average of AI Software Revenue(in Billions), Average of Net Job Loss in the US

This chart plots one averaged point for the whole period, at roughly 51 billion dollars of AI software revenue against a net job loss average of about 0.053. With only one point, it shows where the overall average sits rather than how the relationship moves year by year.

Chart 1.3 Jobs Eliminated vs Jobs Created by AI

Chart type: 100% stacked bar. Fields: Sum of Estimated Jobs Eliminated by AI (millions), Sum of Estimated New Jobs Created by AI (millions)

Across the full period, AI is estimated to have eliminated 2.20 million jobs and created 1.45 million, so more jobs are lost than gained overall - a net loss of about 0.75 million, which matches the Net Job Impact card on Dashboard 2.

Chart 1.4 Global AI Market Value and Estimated Revenue Increase from AI, by Year

Chart type: Line chart (dual axis). Fields: Year, Sum of Global AI Market Value(in Billions), Sum of Estimated Revenue Increase from AI (trillions USD)

The global AI market value stays small and flat through 2018-2023 (30 to 279 billion), then jumps sharply to 400 billion in 2024 and 1,810 billion in 2025. The estimated revenue increase from AI grows more steadily across the same years, from 1.2 trillion in 2018 to 5.5 trillion in 2025.

Chart 1.5 What Explains AI Adoption

Chart type: Decomposition tree. Analyze: Sum of AI Adoption (%). Explain by: AI Contribution to GDP, AI Software Revenue, Companies Prioritizing AI in Strategy, Organizations Believing AI Provides Competitive Edge

Total AI adoption of 2.68 is broken down step by step: following the highlighted path, an AI Contribution to GDP of 490 leads to an AI Software Revenue of 94.41, then to 0.89 for Companies Prioritizing AI in Strategy, and finally to 0.5 for Organizations Believing AI Provides a Competitive Edge.

Dashboard 2: Jobs, Belief and Impact

Objective 2.

The second page looks at jobs and belief in AI. It shows what drives the estimated revenue increase, how belief in AI compares across groups, organizations' use of AI by year, three cards (Net Job Impact, Avg AI Adoption Rate, Total Market Value), a year-by-year summary table, and jobs created versus eliminated by year.

Chart	Visual	Question it answers
2.1	Key Influencers of Estimated Revenue Increase from AI	What pushes the estimated revenue increase up the most?
2.2	Belief in AI Across Groups, by AI Adoption Rate	Who believes in AI the most, and how does that change with adoption?
2.3	Organizations' Use of AI by Year	Has organizations' use of AI shifted over time?
2.4	Estimated Jobs Created and Eliminated by AI, by Year	How do jobs created and eliminated compare, year by year?
2.5	Year-by-Year Summary Table	What are the exact year-by-year figures?

Chart 2.1 Key Influencers of Estimated Revenue Increase from AI

Chart type: Key influencers. Target: Estimated Revenue Increase from AI (trillions USD)

A rise in Expected Increase in Employee Productivity Due to AI has the biggest effect, raising the average estimated revenue increase by 0.6. A rise in Organizations Using AI adds 0.49, and a rise in Organizations Believing AI Provides a Competitive Edge adds 0.31. A fall in Global AI Market Value is linked to a smaller rise of 0.19, showing productivity and adoption matter more than market value alone.

Chart 2.2 Belief in AI Across Groups, by AI Adoption Rate

Chart type: Horizontal bar chart. Fields: Average of Marketers Believing AI Improves Email Revenue, Average of Medical Professionals Using AI for Diagnosis, Average of Americans Using Voice Assistants, Average of Companies Prioritizing AI in Strategy

Companies Prioritizing AI in Strategy is consistently the highest of the four measures, running from about 0.83 up to 0.90 as the AI adoption rate rises. Marketers, medical professionals and Americans using voice assistants sit in a lower band and rise together, from roughly 0.38-0.48 up toward 0.48-0.55, as adoption increases.

Chart 2.3 Organizations' Use of AI by Year

Chart type: 100% stacked column chart. Fields: Year, Sum of Organizations Using AI, Sum of Organizations Planning to Implement AI, Sum of Organizations Believing AI Provides Competitive Edge, Sum of Companies Prioritizing AI in Strategy

The mix of these four measures stays fairly steady from 2018 to 2025, each holding roughly a quarter of the 100% total every year. The main change is a small, gradual increase in the share held by Organizations Planning to Implement AI toward 2024 and 2025.

Chart 2.4 Estimated Jobs Created and Eliminated by AI, by Year

Chart type: Column and line chart. Fields: Year, Sum of Estimated New Jobs Created by AI (millions), Sum of Estimated Jobs Eliminated by AI (millions)

Jobs created (columns) grow from 0.10 million in 2018 to 0.32 million in 2025. Jobs eliminated (line) start lower at 0.05 million in 2018 but overtake jobs created from 2019 onward and keep rising faster, reaching 0.45 million by 2025 - so the gap between jobs lost and jobs gained widens every year after 2018.

Chart 2.5 Year-by-Year Summary Table

Chart type: Table. Fields: Year, Sum of AI Adoption (%), Net Job Impact (M), Sum of Global AI Market Value(in Billions), Sum of Estimated Revenue Increase from AI (trillions USD)

Back to report

Year	Sum of AI Adoption (%)	Net Job Impact (M)	Sum of Global AI Market Value(in Billions)	Sum of Estimated Rev
2018	0.10	-0.05	29.50	
2019	0.20	-0.07	35.00	
2020	0.30	-0.08	45.00	
2021	0.35	-0.09	65.00	
2022	0.35	-0.10	140.00	
2023	0.35	-0.11	279.00	
2024	0.40	-0.12	400.00	
2025	0.63	-0.13	1,810.00	
Total	2.68	-0.75	2,803.50	

This table lists every year's figures side by side, from 29.50 billion of market value in 2018 to 1,810.00 billion in 2025, and totals them at the bottom: 2.68 for AI adoption, -0.75 million for net job impact, 2,803.50 billion for market value, and 26.50 trillion for the estimated revenue increase.

Conclusion

From 2018 to 2025, AI adoption, market value and revenue all grew, but jobs eliminated grew faster than jobs created.

Growth: AI adoption rose every year and jumped most in 2024-2025. Global AI market value stayed fairly flat through 2023 and then jumped sharply, from 400 billion in 2024 to 1,810 billion in 2025, while the estimated revenue increase from AI grew more steadily, reaching 5.5 trillion dollars by 2025. Following the decomposition tree, higher AI contribution to GDP and software revenue line up with higher adoption.

Jobs and belief: Over the full period AI eliminated an estimated 2.20 million jobs against 1.45 million created, a net loss of about 0.75 million, and the gap between jobs eliminated and jobs created widens every year after 2018. Employee productivity gains and organizations using AI are the strongest drivers of the estimated revenue increase. Companies rate AI as strategically important more than marketers, medical professionals or everyday Americans do, though belief among all these groups is rising together as adoption increases.
